

Understand and transform your legacy systems with CM evolveIT.

REDUCE YOUR RISK. WORRY LESS. AVOID DISRUPTION.

Maintaining and modernizing legacy apps no longer needs to hold your business back. CM evolveIT is so powerful that your new teams can easily get up to speed handling the applications your business depends upon. You'll quickly discover a thorough, reliable understanding of the business logic embedded in your legacy systems. That means you can eliminate the chaos and panic of maintenance and enhancements or modernization. Your business continuity is protected since CM evolveIT's full view of business rules and system interactions lets you find the safest path to migrate or decommission legacy code.

With your tasks and data management dependencies quickly and accurately identified, you can do a better job of scoping and project planning.

If you thought the costs and risks to update or modernize were too high, then discover a new way to free your business. EvolveIT offers a solution that is faster, more effective and provides quicker payback than anything you've seen before.

QUICK TURNAROUND, QUALITY OUTPUT AND FAST PAYBACK. YES, IT'S TRUE.

Our automated discovery and documentation of business rules and system interactions enables you to get a handle on legacy code quickly, easily and completely. With your business rules abstracted from the restrictions of legacy code, you are future-proofed and can deploy apps on the optimal platform. And a common understanding between your business and software analysts means you're better positioned to ensure your apps deliver the value that's needed.

**// CM evolveIT can scale up to enterprise environments,
so you can trust it to handle your most complex challenges.**

DEMYSTIFY THE BUSINESS RULES BURIED IN LEGACY APPS.

CM evolveIT's impact analyses provide accurate, comprehensive views of your options to maintain and re-engineer code. You no longer need to worry about hidden business rules because we've done the hard work for you.

- + Business rules are captured and abstracted from the source code
- + Business logic and system dependency reports are automatically generated for point-to-point data flow analysis
- + System maps provide cross-reference scope views, complexity reports and drill up/down capability enabling scalable analysis at the system, component or data level
- + Clone detection enables engineers to identify and avoid production issues from obsolete or redundant code

WATCH YOUR NEW TEAM REACH NEW LEVELS OF EFFICIENCY AND PRODUCTIVITY.

The CM evolveIT interface is so intuitive that discovery and understanding of applications no longer requires in-depth knowledge of enterprise systems.

- + Auto-documentation provides a complete, understandable picture of the application, immediately accessible through the metadata repository
- + Impact analyses are generated and delivered through intuitive graphical interfaces and reports
- + Visualizations help analysts find, interpret, describe and model how rules in the app are running the business
- + CM evolveIT provides a common language understandable by both business and software analysts
- + CM evolveIT is designed to work at scale, reducing problems caused by analyzing programs in isolation

cmEVOLVE IT®

“

CM evolveIT provides almost instantaneous answers to all sorts of common questions about how the components interact and how the data is handled. With the evolveIT diagramming tools, I was able to understand the underlying structure of the program quickly and make the necessary changes.
