

Free your business from CA 2E (Synon) legacy code. Capitalize on innovation with CM M3.

STREAMLINE MODERNIZATION WITH AGILITY, SPEED AND FEWER RESOURCES.

Many companies are trapped by inflexible RPG and COBOL applications generated by CA 2E. They're discouraged by the high cost and risks of code rewrites and the dwindling base of IBM i programmers.

The task of modernizing legacy CA 2E applications no longer needs to hold your business back. CM M3 modernizations are so fast and error-free, you can transform the applications your business depends on and capitalize on responsive user interfaces, commodity hardware, data integration and cloud hosting. CM M3 is a turnkey service, fueled by a flexible, scalable automated transformation engine. The result is a first class hardware-independent web application that your existing team can understand and maintain.

AUTOMATION TRANSFORMS YOUR CODE ON BUDGET AND ON TIME.

The automation engine within CM M3 accelerates the speed of your project while increasing its success. Our proven process begins with a no-cost automated analysis of your application design. Next we provide a fixed-cost bid for transforming your application. We then produce an Architected Rapid Application Development (ARAD) CA Plex model, and programmers proceed quickly to QA and deployment. We're by your side as needed to provide expert guidance from initial assessment to acceptance testing and implementation.

The CM M3 automation is efficient and complete. By eliminating the time, cost and errors of manual labor, you get the quickest possible payback on your modernization investment.

*Than rewriting or adopting packaged software

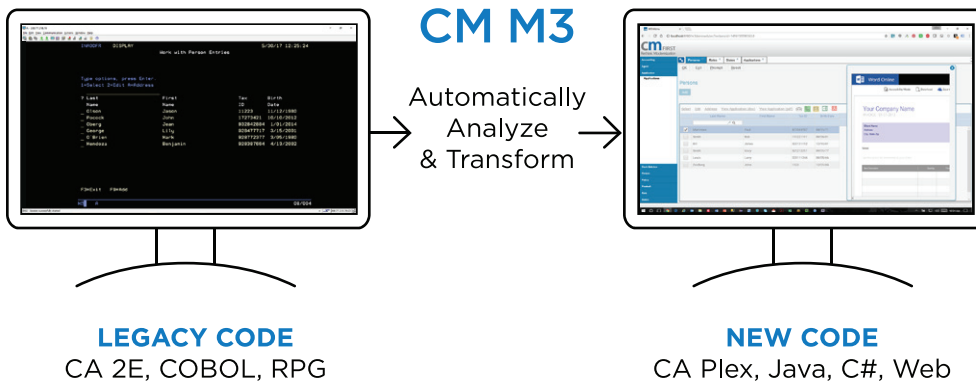

**Of course ASCII displays are still supported, as well

Projects can be scheduled for durations of six to nine months and completed on time for a fixed budget. Your IT department can complete smaller modernization projects in a single budget cycle.

CM M3 IS FASTER, ERROR-FREE AND MORE RELIABLE.

CM M3 is not a mere machine translation of CA 2E code. Our holistic offering yields a modern maintainable application carrying forward all the business rules of the legacy program.

The transformed application can be moved onto and integrated with:

- + Modern programming languages like Java and C#/.NET
- + Commodity hardware, cloud hosting or retained on IBM i Series
- + The database of your choice, including DB2, SQL server, Oracle and MySQL

As a result, your enterprise's key applications and data will be unlocked, enabling:

- + Modern features that have become essential to business – responsive UX, API integration, data mining, and more
- + Platform-independent provisioning that captures the benefits of continuing advances in computing capabilities
- + Your developers to be more productive and easily maintain, modify and integrate using today's web and API focused skill sets

“Our customer Dupouy, with highly complex business requirements, needed to modernize a global ERP system based on CA 2E. We are happy to report that the CM M3 transformation process was a non-event to the business, and gave us a browser-based platform to make necessary improvements to the application quickly and easily.
